6188. PREVENTION OF COMPLICATIONS DUE TO INTRAGLUTEAL INJECTIONS - Kős R. and Votin J. IInd Dept. of Surg., Med. Univ., Budapest, HUNG. 1958, 6/2 (24-28) Illus. 5

There is an increasing number of complications. Sixty-seven cases with infiltration or abscess formations surgically treated are analysed. The great percentage of complications after penicillin injections is connected with the phenomenon of allergy (proved in 18 cases from 28). It is considered that the choice of the site of the injection is of great importance. After an analysis of the anatomical peculiarities of the gluteal region a method is given, the aim of which is to be certain of avoiding the gluteus maximus muscle. The operator's hand with a maximally abducted thumb is placed on the hip region, with the thenar eminence at the upper palpable tip of the trochanter major, the thumb touching the anterior spina iliaca and with the index finger on the line of the trochanter. The spot lying near the head of the second metacarpal bone of the operator is the most suitable for the injection. It must be made in 2 steps: through the skin and subcutis (1st) and through the iliotibial tract of the fascia lata (2nd). This method applied to 20,000 instances has not given complications.

Votin J. Orvostud. Egyet. II. sz. Sebészeti Klin., Budapest - ORV.

HETIL, 1958, 99/35 (1223-1225) Tables 1

Contrary to the general opinion, the absolute number of such complications is large, since the frequent employment of i.m. injections. Sixty-seven cases of surgical complications referred to the authors' hospital were examined in the course of 6 months. The average duration of treatment was 62 days. The pathogenic effect of penicillin allergy in the occurrence of abscesses after injections is discussed.

The authors' new technique is described, which consists of avoidance of the gluteus maximus muscle and of accurate determination of the point of injection with reference to 3 osseous prominences of the hip (anterior iliac spine, greater trochanter and eminentia cristae iliaceae). The injection is done in 2 stages; 1st the skin and s.c. tissue are penetrated, and with a 2nd movement (to avoid the epifascial layer) the aponeurotic plate of the iliotibial tract is pierced. With this technique 20,000 injections have been given without complications. Finally, restriction of indication of intragluteal injection is proposed.

"Present Problems of Antibiotic Treatment in Surgery."

Budapest, Magyar Sebészeti, Vol XVI, No 2, May 1963, pages 84-93.

Abstract: [Authors' German summary modified] The authors stress the great advance made in surgery by the use of antibiotics. The mortality rate of pyogenic infections decreased dramatically. This usefulness of the antibiotics is somewhat reduced by the drawbacks which are present. Therefore, their use has to be considered carefully, especially in surgery. In the hospital, the number of resistant staphylococcus strains increased from 40 to 90 per cent in the last decade and 60 per cent of the personnel became carriers. A year-long discontinuation of the use of penicillin did not improve the picture significantly. The authors advocate a directed application of antibiotics based on determinations of the sensitivity of the causative agent. Further limitations of their prophylactic use is also necessary. The guiding lines for a rational antibiotic therapy of surgical patients are given and the danger of their thoughtless use stressed. 14 Eastern European, the rest Western ref.

"Simulation of Acute Appendicitis by the Perforation of Foreign Bodies"

Budapest, Magyar Sebeszet, Vol 19, No 5, Oct 66; pp 319-321.

Abstract: Authors describe three cases in which the symptoms of acute appendicitis were caused by the perforative appearance of foreign bodies in the abdominal cavity. In two cases the foreign body perforated the small intestine, and in one case the large intestine. In all three cases the perforative opening was sewed in, and in the case of the perforation of the large intestine drainage as well as cecostomy was carried out. The patients recovered. Authors call attention to the significance of preoperative diagnosis.

TITLE: Measurement of liquid and gas flow rates by local heating of the boundary layer

SOURCE: Lvov. Politekhnicheskiy institut. Kontrol'no-izmeritel'naya tekhnika (Control and measurement techniques), no. 2. Lvov, Izd-vo ^univ., 1966, 109-114.

TOPIC TAGS: gas flow, flow meter, rheometer, flow rate

ABSTRACT: A fluid flow meter has been developed whose operation is based on the maintenance of a constant temperature gradient across the boundary layer on a cylinder placed in the flow; the temperature gradient is kept constant by changing the input to a heater in the cylinder in response to temperature changes inside the cylinder. The cylinder contains resistance thermometers and an electric heater whose power consumption is measured. This type of flow meter is useful in that it measures the mass velocity, and therefore, the measured values do not depend on the temperature and pressure of the medium which is particularly important for gases. The flow meter can be easily modified for automatic operation by installing an automatic control of the heater power in response to the input from the resistance thermometers. The linear

TITLE: Antigravitation

PERIODICAL: Pokroky matematiky fyziky a astronomie, no. 6, 1962,  
345-350

TEXT: According to Einstein's GTR, the gravitational potential of a rotating heavy ring contains, apart from the Newtonian force, a component depending on rotation. The action of an accelerated sphere on a particle is also considered. It is possible to suppose that the additional components might cancel the earth's gravitation. E.g. for a density of  $10 \text{ g/cm}^3$ ,  $R = 10 \text{ km}$ , the required acceleration for the sphere is  $10^{17} \text{ cm s}^{-2}$ ; which would mean accelerating to the speed of light within one microsecond. For lower densities much lower acceleration values could be used. Further non-Newtonian forces can be imagined as similar to electric and magnetic fields with moving charge. Heavy antiparticles would make real antigravitation possible. One experiment for the demonstration of

AUTHOR: Kosa, A.

TITLE: Necessary conditions for discontinuous solutions to n-th order variation problems

PERIODICAL: Referativnyy zhurnal. Matematika, no. 6, 1962, 98, abstract 6B415 (Acta math. Acad. scient. hung., v. 11, nos. 1-2, 1960, 23-48)

TEXT: The article is concerned with finding the necessary conditions for a functional extremum of the form

$$I[y] = \int_{x_1}^{x_2} f(x, y, y', \dots, y^{(n)}) dx \quad (1)$$

The function  $f$  has continuous partial derivatives up to the second order in the region  $R = \{(x, y) \in G, y^{(i)} \text{ arbitrary finite quantities for } i = 1, \dots, n\}$ . Here  $G$  is a certain region in the  $x, y$  plane. In the

Card 1/5

S/044/62/000/006/051/127

B156/B112

Necessary conditions for ...

region G we take the points  $(x_1, y_1)$  and  $(x_2, y_2)$ ,  $x_1 \neq x_2$ ; let  $y_1^i$  and  $y_2^i$  be arbitrary numbers ( $i = 1, \dots, n - 1$ ). The point  $x_0$  defines the angular point on  $y(x)$ , if for at least one  $i$  ( $i = 1, \dots, n$ ) the inequality  $y^{(i)}(x_0 - 0) \neq y^{(i)}(x_0 + 0)$  is valid. The class M of the permissible functions  $y(x)$  is defined as:

1.  $y(x) \in D^{(n)}$  on  $[x_1, x_2]$ ;
  2.  $y^{(i)}(x_1) = y_1^{(i)}$ ,  $y^{(i)}(x_2) = y_2^{(i)}$  for  $i = 0, 1, \dots, n - 1$ ;
  3.  $(x, y[x]) \in G$  for  $x_1 \leq x \leq x_2$ .
- In the class M, proximity is defined in the form

$$\rho(y_1, y_2) = \max |y_1(x) - y_2(x)| \quad \text{for } x_1 \leq x \leq x_2.$$

n-th order proximity is defined as:

$$\rho^n(y_1, y_2) = \max \{\rho(y_1, y_2), \rho(y_1^1, y_2^1), \dots, \rho(y_1^n, y_2^n)\}.$$

It is proved that if the function  $y(x) \in M$  reaches the low minimum of the

Card 2/5

S/044/62/000/006/051/127  
B156/B112

Necessary conditions for ...

functional (1), at any point in the range  $x_1 < x < x_2$  the function  $y(x)$  must satisfy the system of differential equations

$$f_{y^{(i)}}(x, y, y', \dots, y^{(n)}) = 0, i = 2, \dots, n,$$

and also the relationship

$$\begin{aligned} f_{y'}(x, y(x), y'(x - 0), \dots, y^{(n)}(x - 0)) &= \\ &= f_{y'}(x, y(x), y'(x + 0), \dots, y^{(n)}(x + 0)). \end{aligned}$$

Moreover, at all the points  $x(x_1 < x < x_2)$  which are not angular,  $y(x)$  must satisfy the equation

$$f_y(x, y, y', \dots, y^{(n)}) - \frac{d}{dx} f_{y'}(x, y, y', \dots, y^{(n)}) = 0.$$

The required Legendre condition is also proved:

Card 3/5

S/044/62/000/006/051/127

B156/B112

Necessary conditions for ...

$$\frac{f}{y}(i)_{y(i)}(x, y(x), y'(x), \dots, y^{(n)}(x)) \geq 0; i = 1, \dots, n,$$

at all points in the range  $[x_1, x_2]$ . If  $y(x)$  reaches the high relative minimum of the functional (1), it must satisfy the Weierstrass condition

$$\ell(x, y(x), y'(x), \dots, y^{(n)}(x); p', \dots, p^{(n)}) \geq 0$$

at all points in the range  $x_1 \leq x \leq x_2$  for any constants  $p', \dots, p^{(n)}$ .

Here:  $\ell(x, y, y', \dots, y^{(n)}; p', \dots, p^{(n)}) = f(x, y, p', \dots, p^{(n)})$

$$- f(x, y, y', \dots, y^{(n)}) - (p' - y') f_y(x, y, y', \dots, y^{(n)}).$$

Moreover, at all points  $x (x_1 < x < x_2)$ ,  $y(x)$  must satisfy the condition:

$$f(x, y(x), y'(x - 0), \dots, y^{(n)}(x - 0)) -$$

$$- y'(x - 0) f_y(x, y(x), y'(x - 0), \dots, y^{(n)}(x - 0)) = f(x, y(x)),$$

$$- y'(x + 0) f_y(x, y(x), y'(x + 0), \dots, y^{(n)}(x + 0)).$$

AUTHOR: Kosa, A.

TITLE: On a regular problem of the variational calculus

PERIODICAL: Referativnyy zhurnal, Matematika, no. 7, 1962, 72-73,  
abstract 7B351. ("Acta math. Acad. scient. hung.", 1960, 11,-  
no. 3-4, 423-428)

TEXT: The paper deals with the further investigation of the variational problems considered in Ref. 7B350. The functional  $I[y(x)]$  is called regular, if the quadratic form

$$\sum_{i,j=1}^n f(y^{(i)}y^{(j)}(x,y,y',\dots, y^{(n)}) \sigma_i \sigma_j$$

is positive definite in all considered points  $(x,y,y^{(i)})$ . It is proved: If  $I[y(x)]$  is regular, then the function  $y(x)$ , which realizes a strong relative minimum of this functional, possesses continuous derivatives up to the order  $n + 1$  inclusively. If the integrand  $f(x,y,y',\dots, y^{(n)})$

1981. LYMPHATIC CONNECTIONS BETWEEN THE NASAL MUCOSA AND INTRACRANIAL SPACE - Kósa Cs., Fuldes I. and Orosz A. Dept. of Anat., Histol. and Embryol., Med. Univ., Debrecen - ACTA MORPH. ACAD. SCIENT. HUNG. (Budapest) 1981, 7/4 (361-369) Illus. 5

In 65 albino rats, 7 rabbits and 3 cats China ink and trypan blue were injected under the mucosa of the nasal septum. Paraffin-embedded or frozen sections, stained with haematoxylin-eosin, carmine or azan were studied: (1) After injection into the anterior one-third of the septum, the dye appeared in the submandibular, sublingual, parapharyngeal lymph nodes and in the tonsilla palatina. (2) The dye injected into the middle third of the septum was found in the lymphatic network of the nasal septum, the subarachnoidal space and in the hypothalamus, extracellularly. (3) The dye was never demonstrable in blood vessels. (4) Communication is by direct lymphatic connection from the nasal mucosa to the subarachnoidal space, or perivascularly or perineurally. (I, 11)

"Mediastinitis and Unilateral Purulent Pleurisy Following the Formation of a 'False Passage' During Tracheotomy"

Budapest, Magyar Sebészeti, Vol 19, No 5, Oct 66; pp 315-318.

Abstract: Author describes the case of a 43-year old man who had suffered a brain concussion as a result of a motorcycle accident. Tracheotomy performed on the basis of an "extended" indication resulted in a complication (formation of a 'false passage'; suppuration) in the form of mediastinitis and concomitant pleurisy. This complication hardly played a role in the patient's death four days after the accident, considering the severity of his injuries; nevertheless the author calls attention to the fact that in the case of tracheotomies performed on the basis of "extended indication" the danger of such complications calls for great care and circumspection on the part of the surgeon.

TITLE : A Bellows-Type Manometer

ORIG. PUB. : Magyar Fiz Polyoirat, 6, No 6, 577-578 (1958)

ABSTRACT : The manometer consists of a bellows which is connected to the gas the pressure of which is to be measured. The deformation of the bellows is measured by a pointer micrometer with a precision of 0.01 mm. In order to eliminate the effect of changes in atmospheric pressure, the entire device is enclosed in a sealed glass jar; the latter feature also makes it possible to use the device as a differential manometer.
